(54) **LECITHIN-CONTAINING POWDER**

(57) Abstract:

PROBLEM TO BE SOLVED: To obtain a lecithin-containing powder having easy handleability while holding a powdery state, and excellent preservability, high in lecithin content and useful as a feed or a food.

SOLUTION: Lecithin is added to a porous powdery vehicle at a ratio of 5-70wt.% based on the powder which contains the lecithin, and they are mixed. As the vehicle, one kind selected from a group consisting of calcium carbonate, coral powder, shell powder, egg shell powder, activated carbon, alumina and silicon dioxide is preferably used.
